## **MOP CONSTRUCTION DEFINED**

#### **YARN TYPE**

Mop yarn type is the most impactful driver of mop launderability, absorbency, durability, and release. Understanding mop yarn type helps drive proper mop selection for varying applications.

#### **MICROFIBER TUBE**

Most durable, stands up to abrasive cleaning and heavy-duty scrubbing with excellent absorbency.

#### **FINISH**

Designed to provide smooth and even release of chemical and floor finish. Less linting compared to rayon.

#### **MICROFIBER**

Highly durable, non-abrasive general-purpose mop.

#### **RAYON**

General-purpose mopping. Reliable liquid absorption. Highest quality of yarn. Resists mildew growth, extending mop life and white appearance.

#### **BLEND SHRINKLESS™**

General-purpose mopping. Pre-launde red for reduced shrinking. Longer-lasting and less linting compared to cotton. Highly absorbent/no break-in required.

#### SYNTHETIC BLEND

All-synthetic mop yarns resist abrasive floor surfaces.

#### **BLEND**

General-purpose mopping. Longer-lasting and less linting compared to cotton. Highly absorbent/no break-in required.

#### **CLEAN ROOM**

Made of woven rayon/polyester fabric that will not fray or lint. For use in Class 10,000 and higher industrial applications.

#### COTTON

General-purpose mopping. Least expensive yarn option. Reliable liquid absorption. Requires break-in, dries slowly, may lint.

#### **ROUGH-FLOOR**

Knitted fleece cotton/polyester blend yarn for highly abrasive surfaces. High absorbency.

#### **NON-WOVEN**

General-purpose mopping. Least expensive wet mop option. Highly absorbent. Requires no break-in and delivers reduced linting versus cotton. Not launderable.

#### NYLON

Non-linting, continuous filament yarn for finishing applications. High launderability.

#### **HEADBAND TYPE**

Headbands drive mop handle selection and can be made of cloth or mesh. Mesh headbands dry faster and can sometimes be used as a scrubbing tool due to the abrasive nature of the material.

#### 1" HEADBAND

Most optimal with side-gate Invader<sup>™</sup> Wet Mop Handle.

#### **5" HEADBAND**

Most optimal with clamp-style Gripper™ Wet Mop Handle.

#### **UNIVERSAL HEADBAND**

Compatible with Gripper<sup>™</sup> and Invader<sup>™</sup> Wet Mop Handles.

#### **TAILBAND TYPE**

Tailbands prevent tangling and improve floor coverage for more efficient mopping. Not all mops have tailbands.

#### **WOVEN TAILBAND**

Allows for commercial laundering. Most expensive type of tailband.

#### YARN TAILBAND

Requires handwashing or limited residential launderings. Economical tailband choice.

#### **NO TAILBAND**

Requires handwashing only.

#### **END TYPE**

Mop ends can be looped or cut, and ultimately impact mop launderability, fraying, linting, and unraveling.

#### **LOOPED END**

Reduces fraying, linting, and unraveling. Allows for laundering, extending lifetime. Generally more expensive.

#### **CUT END**

Economical and practical generalpurpose mop. Ends may fray and unravel. Does not incorporate tailband, covering less area. Disposable or hand wash.

106 Dust Mops CLEANING

**Dust Mopping** 

There are several important factors to consider when choosing a dust mop. Use the guidelines on the following pages to choose the best dust mop for your floor care needs.

#### **General Dust Mopping**

Choose mops with high-dust pickup and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber looped-end and twisted-loop mop heads with reinforced stitching and slip-on/ slide-off backing offer the best performance and launderability.

**Dust Mops** 

#### **Mop Construction Features**

**Twisted-Loops** Highly effective at capturing dust and dirt. Premium Twisted-Loops are less prone to snags. frays, and unraveling during

cleaning and laundering.

**Looped Ends** Reduce fraying and deplying for better durability and longer product life. More effective than cut-end mops.

**Cut Ends** Economical construction for general-purpose dusting.

Reinforced Stitching Reinforced, double-needle stitching at key "wear" points increases product life.

**Backing Design** Slip-on/slide-off backing allows quick, easy setup or breakdown for standard mop frames.

#### Launderability

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability.

BLEND

MICROFIBER

**SYNTHETIC** 

#### **Durability**

The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops are the most durable.

Mops with antimicrobial fibers have greater durability because they inhibit the bacterial growth that causes mop odor and discoloration.

MICROFIBER

#### **Dust Pickup**

Dust pickup is the ability of a mop to remove dust and dirt from the floor surface. Microfiber, blended fiber, and synthetic mops have the highest degree of dust pickup.

Spills happen unexpectedly, creating hazards for patrons and staff which need to be cleaned up as quickly as possible to avoid injuries. Using a string mop and bucket can be timeconsuming and leaves the floor wet. Over-the-Spill Pads make it easier to cover and absorb spills while simultaneously alerting pedestrians to potential slip-and-fall hazards.

<sup>&</sup>lt;sup>1</sup>Bureau of Labor Statistics (BLS)

## Over-the-Spill™ System

Slip-resistant pads quickly cover spills and alert pedestrians.

- · Each yellow pad is coded with universal caution symbol and "Caution Wet Floor" message in English and Spanish
- · Dispensing station mounts on flat surfaces
- · Pads absorb up to 14oz of liquid for faster cleanup

# **MATERIAL HANDLING**

# **CASTERS TO MEET YOUR NEEDS**

Rubbermaid's best-in-class heavy-duty casters have been specially chosen for each of our products to meet your most demanding environments.

# THERMOPLASTIC RUBBER

TPR casters absorb shock, provide floor surface protection, and quiet operation. Chemical- and water-resistant.

# **POLYOLEFIN**

Hard-tread polyolefin casters roll easier than soft tread casters. Nonmarking, impact- and chemical-resistant casters won't flat-spot under static loads or pick up metal shavings, nails, and other debris.

# **PNEUMATIC**

Pneumatic casters provide a cushioned and quiet ride for fragile loads, making them ideal for rough and uneven surfaces, inside and out.
